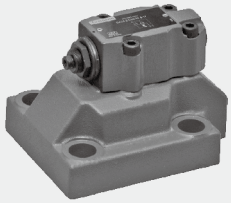
Pressure shut-off valve pilot operated

Type DA/DAW...L5X

Sizes 10 to 32
Up to 315 bar
Up to 240 L/min



Contents

Features

- Sub-plate mounting
- Porting pattern conforms to DIN 24 340, form D,and ISO 5781
- Manifold plate mounting
- 4 pressure ratings
- 4 adjustment elements:
  • Rotary knob
  • Adjustable bolt with protective cap
  • Lockable rotary knob with scale
  • Rotary knob with scale
- Solenoid unloading valve

Function and configuration

Pressure control valves type DA/DAW are pilot operated pressure shut-off valves.
They are used to charge fluid to accumulator in system, or to unload the low pressure pump in high/low pressure pump system.
Pressure shut-off valves basically consist of the main valve (1) with the spool assembly (3), pilot valve (2) with pressure adjustment element and check valve (4). In valves size 10, the check valve (4.1) is built into the main valve (1). In valve sizes 25 and 32, the check valve (4.2) is built into a separate plate installed under the main valve (1).

Pressure shut-off valve type DA

· Diverting pump flow from P to A to P to T.

The pump delivers flow via check valve (4) into the hydraulic system (P to A). Pressure in port A acts on the pilot control spool (6)via pilot line (5). At the same time, pressure in port P passes to the spring loaded side of the main spool (3) and ball (9) in the pilot valve (2) via orifices (7) and (8) . As soon as the setting pressure in the hydraulic system is reached, the ball (9) lifts off against spring (10). Pressure fluid now flows via orifices (7) and (8) into spring chamber (11).The fluid returns to tank either internally via control line (12) in valve type DA..L5X/... or externally via control line (13) in valve type DA..L5X/..Y... Due to orifices (7) and (8), pressure drop is now presented at the main spool (3). The main spool (3) now lifts off its seat and opens the connection from P to T. The check valve (4) closes the connection from A to P. The ball valve (9) is kept opening by the system pressure via pilot spool (6).

· Diverting pump flow from P to T to P to A.

The area of the pilot spool (6) is 10 % or optionally 17 % greater than the effective area of the ball (9). The effective force on the pilot spool (6) is, therefore, 10 or 17 % greater than the effective force on the ball (9).
When the actuator pressure falls to the cut-off pressure which corresponds to the switching pressure differential, spring (10) pushes ball (9) on to its seat. Pressure is then built up on the spring loaded side of the main spool (3). In conjunction with spring (14), the main spool (3) is closed the connection from P to T is isolated. The pump flow passes again via the check valve (4) into the hydraulic system (P to A).

Pressure shut-off valve type DAW

The function of this valve is basically the same as the DA valve. A solenoid directional valve (15) can, however switch the setting cut-off pressure of the pilot valve either from P to A or from P to T.

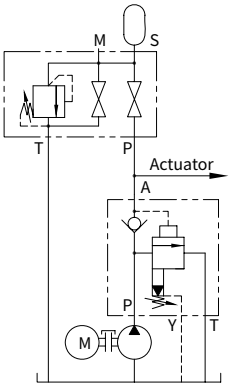
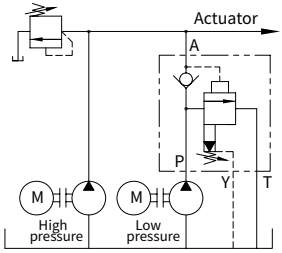
Sample circuit

Hydraulic system with accumulator



Hydraulic system with high and low pressure pumps



Notes for fixing:
(1) Maintain the resistance as little as possible between the valve DA and accumulator.
(2) For large flow pump and /or low pressure differential (10%), Version Y is best.

Ordering code

Without directional valve = No code
With directional valve=W

Pilot operated valve=No code
Pilot valve without main spool assembly = C
(No mark for nominal size)
Pilot valve with main spool assembly = C
(Marked with size 30)

Nominal size 10 =10
Nominal size 25 =20
Nominal size 32 =30

For DAW:
Normally closed
(load when breakaway, unload when electrified) =A
Normally open
(unload when breakaway, load when electrified) =B

Rotary knob =1
Adjustable bolt with protective c =2
Lockable rotary knob with scale =3
Rotary knob with scale =7

Series L50 to L59 = L5X
(L50 to L59 series :unchanged installation and connection dimensions)

Note: Y (Outer) type is recommended for large pump flow rates and low switching differential pressures (10%).

5 = Pressure adjustable 0~ 50bar
10 = Pressure adjustable 50~100bar
20 = Pressure adjustable 100~200bar
31.5 = Pressure adjustable 200~315bar

Switching pressure differential (P → A)
10 = In the mid range 10 %
17 = In the mid range 17 %

No code= Internal pilot oil drain
Y = external pilot oil drain

6E= Only DAW: With high performance directional spool valve

G24 = Only DAW: 24V DC
W220-50 = 220V AC, 50Hz
W120-60 = 120V AC, 60Hz
W220R = 220V AC rectification
(Other voltage refer to type WE6)

N= Only DAW: With hand override

Z4=Electrical plug without lamp
Z5L= Electrical plug with lamp
Only DAW:

No code= NBR seals
V = FKM seals

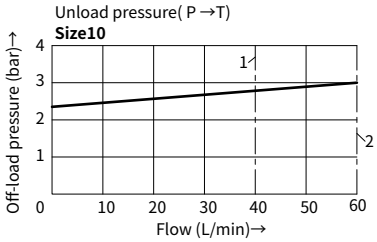
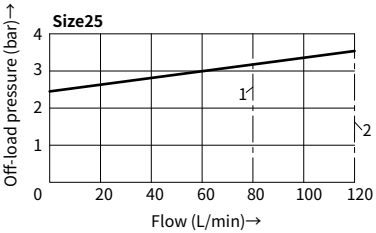
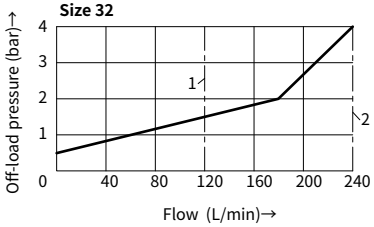
Technical data

Fluid			Mineral oil suitable for NBR and FKM seal		
			Phosphate ester for FKM seal		
Fluid temperature range		℃	-30 to +80 (NBR seal)		
			-20 to +80 (FKM seal)		
Viscosity range		mm^2/s	10 to 800		
Degree of contamination			Maximum permissible degree of fluid contamination: Class 9. NAS 1638 or 20/18/15, ISO4406		
Max.operating pressure	Port A	bar	315		
Max. setting pressure		bar	50, 100, 200, 315		
Size			10	25	32
Max. flow-rate	version 10%	L/min	40	80	120
	version 17%		60	120	240
Solenoid technical data			Refer to version WE6, normally close chooses 3WE6A9, normally open choose 3WE6B9		
Installation			Optional		
Size			10	25	32
weight	DA	kg	Approx.3.8	Approx.7.9	Approx.12.3
	DAW	kg	Approx.5.3	Approx.9.4	Approx.13.8
	DAC	kg	Approx.1.2 (If version DAWC, add 1.5 kg)		
	DAC30	kg	Approx.1.5 (If version DAWC30, add 1.5 kg)		

Characteristic curves (Measured at ϑ_{oil} =40°C ±5°C , using HLP46)







1 Used for 10% switching pressure differential
2 Used for 17% switching pressure differential

These curves are valid for an outlet pressure (T) = zero over the full flow range.

Switching pressure differential based on setting value (P → A)
